Janitized® is a registered trademark of APC Filtration Inc.
Janitized® vacuum bags and filters are the industry’s first and most comprehensive line of "commercial grade" aftermarket filters designed for commercial cleaning professionals. Manufactured by APC Filtration Inc., an ISO 9001:2015 quality managed company providing over 35 years of air filter design, engineering, manufacturing and appliance testing to global equipment and appliance manufacturers, Janitized® vacuum bags and filters incorporate filter materials that meet or exceed OEM filter specifications and performance. These products are exceptionally tough and durable; built to handle demanding cleaning applications while improving indoor air quality (IAQ) and worker safety by capturing 99% of sub micron dust particles and allergens. Janitized® vacuum bags & filters meet and/or exceed OEM product specifications providing up to 40% more vacuum cleaner suction, up to 55% more dust loading area and up to 46% more wet/dry tear strength vs genuine OEM filter bags.

**Results of Fractional Efficiency Testing conducted by an independent laboratory @ 0.3 micron @ 26.5 fpm.**

When you purchase Janitized® products you get premium quality filtration and peace of mind.

Janitized® aftermarket panel & industrial filters offer two filter media options to cover most applications and operating conditions:

1. Cellulose filters for dry cleaning applications
2. Washable Spunbond filters for wet or dry applications

The Janitized® filter frame construction is made up of a four (4) piece rigid 24 gauge electro-galvanized steel frame, designed to prevent flexing and premature corrosion. Additional stiffeners are added to handle the sweeper’s automatic vibration cleaning systems. Janitized® panel filters provide increased filtration & longer filter life, reducing equipment downtime, filter waste disposal and maintenance costs.

Natural disasters and man-made failures or defects cause damage to buildings and its contents disrupting people's lives, businesses and the communities they are in. The disaster restoration industry uses a variety of specialized equipment to remedy the damage caused by water, fire and mold growth.

The equipment is only as good as the filters used.

Janitized® aftermarket filters offer a variety of filter designs to maximize the efficiency of the specialized restoration equipment. From Carbon to HEPA filtration rated at 99.97% at 0.3µm; Janitized® filters help improve indoor air quality during the remediation and after by capturing airborne contaminants and returning the air to a level of cleanliness equal to or better than pre-loss conditions.
